

## Steps on how to change lenses

1. Hold the sunglasses as picture shows. Please do not bend the frame.

2. Flip up the lenses a little bit with your thumb. Please do not flip up too high. The higher you flip up the lenses, the more difficult it is to take out the lenses.

3. Hold the lens-holder with both of your thumb and forefinger as picture shows, and lift out the lens-holder from frame by one side. Please do not just hold the lens.

4. Place the new lenses on the frame, and push lens-holder back to frame by your thumb.
